OBJECTIVE

To obtain a full time position as a software developer working with emerging technologies in the Bay Area

WORK HISTORY

December 2016 to
Current

Full Stack Software Engineer - The Scion Group

Responsibilities:

- Maintain, Improve and consult on tracking/analytics web app
- Rebuild existing platform's front end (React)

August 2015 to
December 2016

Full Stack Software Engineer - Bellwether Creation Company

Responsibilities:

- Develop maintainable MVPs for a variety of projects
- Maintain long-term projects with continuous improvements

January 2015 to
August 2015

Consultant - Olenick & Associates

Worked mostly for Bellwether via consultancy. See above for responsibilities.

EDUCATION

Aug 2014

Bachelor of Science in Computer Science

Iowa State University – Ames, IA

SOFTWARE/PROGRAMMING SKILLS

- Ruby on Rails, Javascript, PostgreSQL, MongoDB, Redis, Java, Swift, HTML/SCSS
- Web Development (Ruby on Rails, React, Meteor), Android, iOS
- Git, Heroku, AWS, RSpec (Unit Testing), Codeship (CI), Twilio, Mailgun

NOTABLE PROJECTS

Scion Intelligence - Ruby on Rails/Android/iOS

Management/Analytics software for a large student housing company. Long running project with many concurrent technologies including Postgres, MongoDB, Redis, Sidekiq and React.

Scapegoat - Ruby on Rails

Crowdsourced 'Smart Scheduler' tool for students. Suggests classes and organizations based on preferences, friend participation and major track.

Tip Yourself - iOS/Ruby on Rails (API)

iOS app with Ruby on Rails backend. Synapse Pay API as POS. Allowed users to maintain a 'Tip Jar' where they could tip themselves for constructive behavior.
